

MEAL MATE

Where meal planning meets inspiration, simplicity, and community.

MealMate will help you

Find New Recipes 

What

Meal Mate is a mobile app designed to help students and young adults plan, budget, and cook meals easily.

At its core, Meal Mate keeps track of users groceries and suggests meals based off that. Saving time, money, and food from going bad or untouched.

It combines meal inspiration, cost tracking, and a recipe-sharing community into one fun, accessible experience.

Why

Many users struggle with what to eat, how much it costs, and how to cook it.

From our user testing, we learned:

- Users want quick, budget-friendly meal ideas.
- They appreciate visual grocery lists and easy-to-follow recipes.
- They like the idea of sharing and seeing meals from real people—not just recipes from chefs.

Meal Mate fills the gap by making meal planning social, visual, and budget-conscious.

How

Using Figma we have created a high-fidelity prototype. Before that, we have completed:

- A user flow
- A HTA (Hierarchical Task Analysis) map
- Wireframes and screen designs
- A strong visual identity and logo
 - Storyboard and user journey maps
- Competitor analysis and early user interviews
- Multiple user testing at different stages

Target Audience

Target Group A

- University students
- Living away from home for the first time
- Limited time
- Overwhelmed
- Use their phone a lot
- Unorganised
- Not much cooking experience

Target Group B

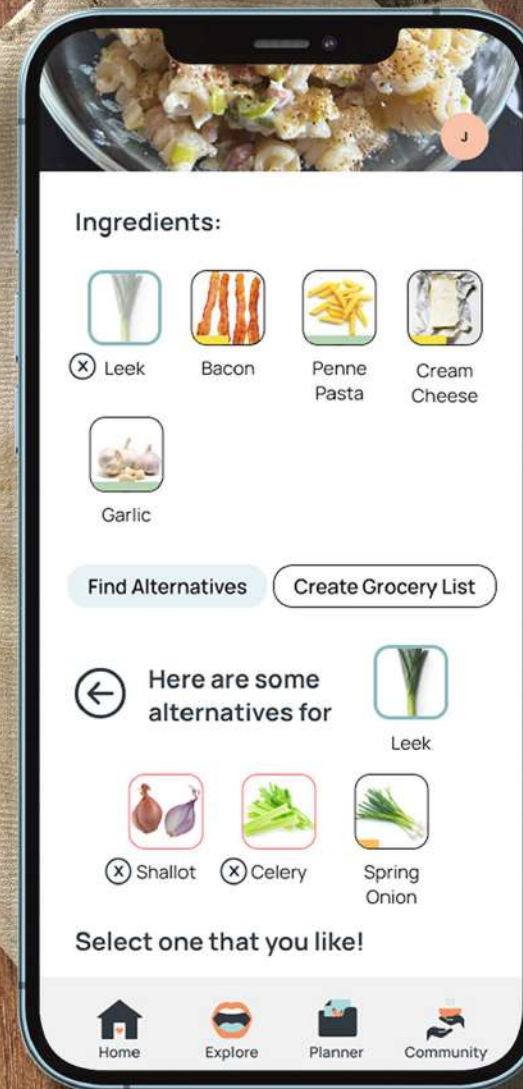

- University students
- Limited time
- Have some cooking experience
- Have a hard time staying organised with their groceries
- Tired of eating the same things

Target Group C

- Young adults
- Busy
- Seems to go to the supermarket everyday
- Needs leftovers for their busy work days

Icons

The icons are flat, clean, and have a playful, modern aesthetic.

The color palette mixes black, muted orange, and blue for a warm yet fresh vibe.

The icons are consistent in weight and style, making them suitable for UI integration.
